Dear Ladies and Gentlemen,

With reference to your consolation of 12 Sept 2019 published on TRC website

(https://trc.gov.jo/DetailsPage/ConsultingDetails?ID=95)

Our proposal to build a solid, transparent, easy to use and sustainable regulation for TRC is as following:

1- On International level: ongoing coordination with ITU to align the Jordanian FAP (Frequency Allocation Plan) with International arrangements

2- On Local level:

  a. Assignment of frequencies, to build a table that has similar format to ERC 70-03 Recommendation; This step will simplify the approval work on the customer side and as such lower the communication burden for the authority

  b. Identify licensing of frequency :

    i. Define general assignment of frequency: no individual license is required as the band is assigned globally for all users

    ii. Define individual licensing of specific brands: if a general assignment is not available or not wanted a dedicated individual license may be requested

  c. Define Type Approval procedure , and labelling requirements (including complete procedure, rules, regulations, limits and standards)

  d. Define Import permission related procedures and documents

  e. Define External offices roles and related regulations

Notes: From the point No.2 please be aware that we recommend that you have for each point a separate document, i.e. the output on Local level will be 5 Documents.
